

## AMENDMENT

Please amend the above-identified application as follows:

### Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

1. A method for controlling call logging, comprising:

detecting a context for a call, wherein the context for a call includes the identity of the caller and the identity of the callee, the origin device identity and origin device owner, the destination device identity and destination device owner, the location of the caller and the location of the callee, the path of a call, and billing information for the caller and billing information for the callee, further comprising:

detecting a plurality of context clues for a call, wherein said plurality of context clues comprise an authenticated identity of a caller of said call, an authenticated identity of a callee of said call, an identity of an origin device, an identity of a destination device, a location said call originates, and a location said call terminates, a subject matter of said call, a context of previous calls between said caller and said callee, and a line number path of said call; and

identifying a context for said call from said plurality of context clues, including inferring from said context clues who is placing said call, who is receiving said call, whether said call is behalf of another, whether a

backup party is accessed, at least one device utilized for said call, a location of said at least one device utilized for said call, a billing plan for said call, a path of line numbers accessed during said call, and a subject matter of said call;

filtering a plurality of context based logging requests for a plurality of parties according to said context;

detecting a selection of said plurality of context based logging request that are relevant for said context;

determining said at least one context based logging request that is valid for said context for said call;

accessing at least one context based logging request valid for said context for said call; and

recording said call according to said context based logging request, including notifying at least one party to said call that said call is being recorded;

logging said context according to said context based logging request, including:

notifying at least one party to said call that said context for said call is being logged; and

notifying at least one party to said call of a designated party for which said context is being logged;

responsive to detecting an update to said context during said call, updating said logging of said context; and

controlling output of said logged context to a party making said logged context request.

2. The method for controlling call logging according to claim 1, wherein said context is detected from a context inference service executing within a trusted telephone network.
3. The method for controlling call logging according to claim 1, wherein said context is detected from a context inference service executing outside a trusted telephone network accessible via a network.
- 4-6. (Cancelled)
7. The method for controlling call logging according to claim 1, wherein said at least one context based logging request is requested by at least one from among a party to said call, a party called on behalf of for said call, a third party, and a guardian of a party to said call.
8. The method for controlling call logging according to claim 1, wherein said at least one context based logging request identifies at least one context based criteria for logging said context of said call.
- 9-15. (Cancelled)
16. A system for controlling call logging, comprising:  
  
a logging controller communicatively connected to a trusted telephone network;  
  
means for detecting a context for a call at said logging controller, wherein the context for a call includes the identity of the caller and the identity of the callee, the origin device identity and origin device owner, the destination device identity

and destination device owner, the location of the caller and the location of the callee, the path of a call, and billing information for the caller and billing information for the callee, further comprising

means for detecting a plurality of context clues for a call, wherein said plurality of context clues comprise an authenticated identity of a caller of said call, an authenticated identity of a callee of said call, an identity of an origin device, an identity of a destination device, a location said call originates, and a location said call terminates, a subject matter of said call, a context of previous calls between said caller and said callee, and a line number path of said call; and

means for identifying a context for said call from said plurality of context clues, including inferring from said context clues who is placing said call, who is receiving said call, whether said call is behalf of another, whether a backup party is accessed, at least one device utilized for said call, a location of said at least one device utilized for said call, a billing plan for said call, a path of line numbers accessed during said call, and a subject matter of said call;

means for filtering a plurality of context based logging requests for a plurality of parties according to said context;

means for detecting a selection of said plurality of context based logging request that are relevant for said context;

means for determining said at least one context based logging request that is valid for said context for said call;

means for accessing at least one context based logging request valid for said context for said call; ~~and~~

means for recording said call according to said context based logging request, including notifying at least one party to said call that said call is being recorded;

means for logging said context according to said context based logging request, including:

means for notifying at least one party to said call that said context for said call is being logged; and

means for notifying at least one party to said call of a designated party for which said context is being logged;

means for responsive to detecting an update to said context during said call, updating said logging of said context; and

means for controlling output of said logged context to a party making said logged context request.

17. (Original) The system for controlling call logging according to claim 16, wherein said context is detected from a context inference service executing within said trusted telephone network.

18. (Original) The system for controlling call logging according to claim 16, wherein said context is detected from a context inference service executing outside said trusted telephone network accessible via a network.

19-21. (Cancelled)

22. (Original) The system for controlling call logging according to claim 16, wherein said at least one context based logging request is requested by at least one from

among a party to said call, a party called on behalf of for said call, a third party, and a guardian of a party to said call.

23. (Original) The system for controlling call logging according to claim 16, wherein said at least one context based logging request identifies at least one context based criteria for logging said context of said call.

24-30. (Cancelled)

31. A computer program product for controlling call logging, comprising:

a recording medium;

means, recorded on said recording medium, for detecting a context for a call, wherein the context for a call includes the identity of the caller and the identity of the callee, the origin device identity and origin device owner, the destination device identity and destination device owner, the location of the caller and the location of the callee, the path of a call, and billing information for the caller and billing information for the callee, further comprising:

means, recorded on said recording medium, for detecting a plurality of context clues for a call, wherein said plurality of context clues comprise an authenticated identity of a caller of said call, an authenticated identity of a callee of said call, an identity of an origin device, an identity of a destination device, a location said call originates, and a location said call terminates, a subject matter of said call, a context of previous calls between said caller and said callee, and a line number path of said call;  
and

means, recorded on said recording medium, for identifying a context for said call from said plurality of context clues, including inferring from said

context clues who is placing said call, who is receiving said call, whether said call is behalf of another, whether a backup party is accessed, at least one device utilized for said call, a location of said at least one device utilized for said call, a billing plan for said call, a path of line numbers accessed during said call, and a subject matter of said call;

means, recorded on said recording medium, for filtering a plurality of context based logging requests for a plurality of parties according to said context;

means, recorded on said recording medium, for detecting a selection of said plurality of context based logging request that are relevant for said context;

means, recorded on said recording medium, for determining said at least one context based logging request that is valid for said context for said call;

means, recorded on said recording medium, for accessing at least one context based logging request valid for said context for said call; ~~and~~

means, recorded on said recording medium, for recording said call according to said context based logging request, including notifying at least one party to said call that said call is being recorded;

means, recorded on said recording medium, for logging said context according to said context based logging request, including:

means, recorded on said recording medium, for notifying at least one party to said call that said context for said call is being logged; and

means, recorded on said recording medium, for notifying at least one party to said call of a designated party for which said context is being logged;

means, recorded on said recording medium, for controlling output of said logged context to a party making said logged context request.

32-37. (Cancelled)

38. (Original) The computer program product for controlling call logging according to claim 31, further comprising:

means, recorded on said recording medium, updating said logging of said context according to an updated to said context during said call.

39-40. (Cancelled)

41. (Currently Amended) A method for controlling call receipts, comprising:

logging a context entry of a call for a particular party according to said context meeting a context criteria of a logging request, wherein the context for a call includes the identity of the caller and the identity of the callee, the origin device identity and origin device owner, the destination device identity and destination device owner, the location of the caller and the location of the callee, the path of a call, and billing information for the caller and billing information for the callee, further comprising; and

responsive to a request by said particular party, controlling output of said logged context entry to said particular party as a receipt for said call.

42. (Original) The method for controlling call receipt according to claim 41, wherein said request comprises at least one parameter for selecting said context entry.

43. (Original) The method for controlling call receipt according to claim 41, wherein said logged context entry is output to at least one from among a telephony device, a computing system, or a printer.

44. (Currently Amended) A system for controlling call receipts, comprising:

means for logging a context entry of a call for a particular party according to said context meeting a context criteria of a logging request, wherein the context for a call includes the identity of the caller and the identity of the callee, the origin device identity and origin device owner, the destination device identity and destination device owner, the location of the caller and the location of the callee, the path of a call, and billing information for the caller and billing information for the callee, further comprising; and

means responsive to a request by said particular party, for controlling output of said logged context entry to said particular party as a receipt for said call.

45. (Original) The system for controlling call receipt according to claim 44, wherein said request comprises at least one parameter for selecting said context entry.

46. (Original) The system for controlling call receipt according to claim 44, wherein said logged context entry is output to at least one from among a telephony device, a computing system, or a printer.

47. (Currently Amended) A computer program product for controlling call receipts, comprising:

a recording medium;

means, recorded on said recording medium, for logging a context entry of a call for a particular party according to said context meeting a context criteria of a

logging request, wherein the context for a call includes the identity of the caller and the identity of the callee, the origin device identity and origin device owner, the destination device identity and destination device owner, the location of the caller and the location of the callee, the path of a call, and billing information for the caller and billing information for the callee, further comprising; and

means, recorded on said recording medium, for controlling output of said logged context entry to a requesting party as a receipt for said call.
